PHOTOCELL MODULE

PCA-C

PCA-T

The module is wired on both ends for a quick, easy installation

The glass window protects the interior of the module

The photocell is shielded from the fixture's illumination, even when used with an arm mounted fixture

The PCA Photocell Module is an innovative way of overcoming problems with photocells that cycle the lamp because of unwanted light sources in the environment. The PCA Photocell Modules are rotatable 360 degrees, so the photocell can be aimed away from light sources. The Photocell Module accepts a standard, twist lock photo cell. The module has a glass window to protect the photocell from the elements and premature failure. The photocell is also shielded from light emissions from the fixture.

The door is held in place with two captive screws and tethered with a stainless steel cable (not shown)

The Photocell Module is rotated by loosening three set screws.

The Photocell Module slips over a 4 inch od pole
